ASSIGNMENT 02 REPORT

Define Phase · Ideation · Wireframes · Design System

Team Members:

1. Manar Ahmed Ahmed Hashad
2. Maryam Ahmed Ahmed Hashad
3. Nada Mohamed Rashid Saad
4. Shima Samir Ahmed Ebrahim
5. Shorouk Mostafa Mohammed

1. Define Phase — Problem Statements

STAGE 02:
Define a Problem

PROBLEM STATEMENT

USER NAME	is a/an	USER CHARACTERISTICS
University students		learner seeking affordable study resources
USER NEED		
who needs	access to textbook exchange, AI-powered study tools (summarization, quizzes, mind maps, flashcards), and a collaborative learning community	
INSIGHT		
because	educational materials are expensive, traditional study methods are inefficient, and there's a lack of platforms that integrate resource sharing with intelligent learning assistance	

Pain Points

- Overwhelming number of textbook options with unclear quality and pricing
- Secondhand products appear "sketchy" without proper verification
- Don't know which sellers to trust in peer-to-peer exchanges
- Inconsistent rating systems across platforms make evaluation difficult
- Difficult to identify reliable listings for academic materials
- Information overload on traditional e-commerce platforms

5Ws and H

- Who:** College students who rely on reviews before purchasing
- What:** They need to trust sellers on platforms for books and study materials
- Where:** On mobile e-commerce apps while browsing at home or during short breaks
- When:** When shopping for mid-to-high priced products (textbooks, calculators, appliances, etc.)
- Why:** They scroll through long product lists, read multiple reviews, and often feel uncertain about purchases
- How:** They need AI-powered tools to summarize reviews, generate study materials, and connect with trusted peers

2. Goal Statement

STAGE 03:

Ideate a solution

GOAL STATEMENT

PRODUCT (WHAT)

Our **Student Exchange & AI Study Platform**

will let users

PERFORM SPECIFIC ACTIONS (WHAT)

exchange textbooks and access AI study tools

DESCRIBE WHO THE ACTION WILL AFFECT (WHO)

which will affect **university students seeking affordable resources and efficient study methods**

DESCRIBE HOW THE ACTION WILL POSITIVELY AFFECT USERS (WHY)

by **reducing textbook costs, providing AI-powered summarization, quizzes, mind maps, flashcards, and fostering a collaborative learning community**

DESCRIBE HOW YOU WILL MEASURE THE IMPACT

We will measure effectiveness by **tracking user engagement, cost savings reported, AI tool usage rates, and student satisfaction scores**

2.1 Selected Solution — EduHub Feature Set

After prioritization, we selected the following feature set for the initial product:

Feature 1: Trusted Book Exchange Marketplace

- Listings with book photos, condition rating (1–5), ISBN, and price/point value
- Seller profile with verified university email, rating, and exchange history
- Point-based economy: earn points by listing; spend points to get books
- Secure exchange confirmation: points released only when buyer confirms condition

Feature 2: AI-Powered Study Suite

- Book Summarizer — upload PDF, select chapter range, receive structured summary
- Flashcard Generator — AI creates Q&A cards from any uploaded text or summary
- Quiz Builder — auto-generates MCQ, True/False, and short-answer practice tests
- Mind Map Creator — extracts key concepts and builds visual topic maps

Feature 3: Student Community Hub

- Course-specific discussion boards organized by university, faculty, and subject

- Upvote system for best answers; top contributors earn bonus points
- Resource sharing: attach notes, summaries, or links within threads

3. Wireframes — Screen Layouts & Interactions

Wireframes were designed in Figma using low-fidelity layouts. The following section documents each primary screen and describes its key UI elements and interactions. All screens follow a mobile-first design approach

3.1 Wireframes

3.2 Screens

S-01 .Home Page

S-02 .Wishlist

S-03 .Wishlist empty

S-04 .Element Details

S-05 .Chatbot

S-06 .Community

4. Design System Initialization

The EduHub design system ensures visual consistency across all screens. It is implemented in the React Native project structure with dedicated configuration files.

4.1 Colors Palette

Colors are organized into Primary, Secondary, and Neutral roles as defined in the project requirements.

4.2 Project Fonts — assets/fonts/

The following typography scale defines all text styles used in EduHub, stored in the assets/fonts/ folder as a fontStyles.js configuration file.

4.3 Custom Buttons — components/

All reusable UI buttons are stored in the components/ folder at the project root. The following button types have been designed to cover all interaction patterns across EduHub screens.

4.4 Project icons
